Description

This is a degreasing machine; a new system of cleaning that will finish with the hard job of removing the grease and dirty from the kitchen and bakery tools (filters, trays, frying pans, pots...).

These degrease tanks control the temperature with a thermostat. It will keep the same level of cleanliness during one month, 24 hours a day. You will only need to fill the tank with water, close it and leave the water to be heated; once it happens, you can add the detergent DK-6 (efficient against the grease and other types of dirty). Once the detergent is dissolved the machine will be ready to be used.
